

National Resource Hub

Unifying Resource Management Nationwide

The National Resource Hub is a suite of web-based tools that support a consistent approach to the resource management preparedness process for:

- Automating the use of National Incident Management System (NIMS) resource typing definitions, position qualification sheets, and position task book templates
- Inventorying individual resources – personnel, equipment, teams, supplies, and facilities
- Managing personnel qualifications, certifications, and credentials consistently with the National Qualification System (NQS)
- Supporting existing resource management-related guidance, policies, practices, and mutual aid compacts

National Resource Hub

Unifying Resource Management Nationwide

What It Does

- Consolidates and integrates existing FEMA-provided systems for resource management preparedness.
- Stores information in a secure cloud-hosted, government-authorized environment.
- Ensures organizations and resource owners retain full ownership and control over their resources.
- Offers a no-cost solution for the whole community.

What It Doesn't Do

- Is not a deployment system. It does not allow any agency or individual to request or deploy resources and personnel through the system.
- Organizations and resource owners do not lose control or ownership over their resource information.
- Does not change or modify any existing mutual aid agreements or compacts.

RTL – Resource Typing Definitions, Position Qualification Sheets, and Position Task Book Templates

Provides online library of all resources typing definitions, job titles/position qualification sheets, and position task book (PTB) templates that have been released by FEMA as a part of the NIMS. Resource typing definitions and position qualification sheets serve as the common language for the mobilization of resources and personnel.

RIS – Resource Inventory System

Provides a solution to identify and inventory resources and personnel, consistently with NIMS resource typing definitions and job titles/position qualification sheets. Users can inventory all their resources including equipment, personnel, teams, facilities, and supplies for day-to-day use and those available for mutual aid in larger-scale incidents.

OneResponder – Personnel Qualifications Management System

Supports organizations in managing their personnel and individual responder qualifications and training history in implementing the National Qualification System. It allows organizations to establish position requirements by issuing PTBs and provides functions to customize and track training and performance requirements to achieve capability targets.
